

ETHERIFIED CARBAMATE CROSSLINKING AGENTS  
AND THEIR USE IN CURABLE COMPOSITIONS,  
PARTICULARLY FILM-FORMING COMPOSITIONS

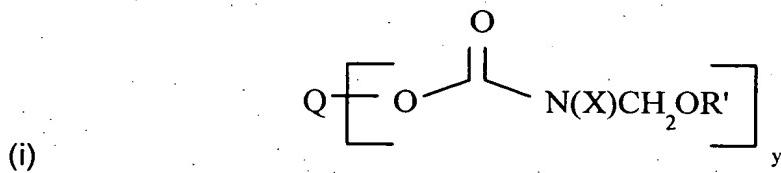

5

Abstract of the Disclosure

The present invention provides a reaction product of reactants comprising:

- a) a polyisocyanate;
- b) a hydroxyalkyl carbamate;
- 10 c) an aldehyde; and
- d) at least one monohydric alcohol.

Additionally provided is a composition of matter comprising the structure:

15

where Q is a multi-valent organic moiety containing urethane linkages; X is H, -CH<sub>2</sub>OH, or -CH<sub>2</sub>OR'; R' is an alkyl or aryl group having from 1 to 12 carbon atoms; and y is at least 2. The reaction product described above may have the structure (i).

20 The reaction product and composition of matter are suitable for use as crosslinking agents in a variety of curable compositions further comprising at least one polymer having functional groups that are reactive with the crosslinking agent. Such curable compositions may be used as film-forming compositions.
